March, 2019

Hello, Friends,

It's been awhile! The last meeting was Tues., Oct. 23, 2018, so it feels great to be back in Rock-Ford A's mode again! As you know, there are no newsletters during our winter break of November- February. If you happen to know of any club member who is not getting their March through October monthly newsletter via email or US mail, please contact me.

While everyone is breathing fresh spring air, please think ahead. Take pictures of you and your buddies working on your car! Take pictures of going places with your car! Write or call me about events, issues - anything that pertains to life with a Model A. I am always looking for pictures and articles for future editions of the newsletter. It's always great to hear and see what everyone's working on.

# Something Special For the Lady A's

by Chris Aupperle

Savannah by the Sea: Model A Ford Era Beachwear

MARC FASHION COMMITTEE SEMINAR  
March 2, 2019  
SAVANNAH, GEORGIA

This year's fashion seminar at the MARC National Meet in Savannah, Georgia was all about beachwear during the Model A Ford Era. It seemed only fitting to focus on this aspect of fashion being so close to an Atlantic beach! Women's and men's swimming suit styles emerging into the 1920s were androgynous - very similar to each other with smooth tunic styles and close-fitting shorts, a very relaxed attitude towards the way women clothed their bodies, related to the boyish 20s styles of emerging dress. Some bathing suits trousers were wide shorts, and they usually had a tucked-in top and a waistline belt. Other styles had neat trim trunks barely showing under a top which easily flared into a low-belted skirt.

In the 1920s, beach or lounge pajamas were usually a top and trouser set with matching jacket. By the 1930s, one-piece, jumpsuit-style pajamas were quite popular and many soon featured a very wide leg. Fabric like shantung, linen or cotton was accepted for the beach and lounging pajamas, but as they became widely popular in the 1930s, many were also available in rayon. Pajamas were made in an amazing array of bold colors and patterns."

*Come join the Lady A's Chat next month on Tuesday, April 30 for a seminar on this topic presented by Chris Aupperle.*

**And from our February 2019 Soup Lunch....**

## **Chris Aupperle's White Chicken Chili**

1 lb. dry white northern beans  
5 ¼ C. chicken broth  
2 cloves minced garlic  
1 large onion, chopped  
5 C. diced chicken breast, cooked

¾ Tbsp. white pepper  
¾ Tbsp. oregano  
¾ Tbsp. cumin  
1 – 7 oz. can green chiles

Soak beans overnight and then drain. In a large kettle, combine beans, chicken broth, garlic, onion and spices. Simmer covered for 2 hours or until beans are tender. Stir occasionally. Stir in green chiles and diced chicken. Simmer covered about an hour. Thirty minutes prior to serving, thicken liquid with cornstarch or your choice of flours (I used a gluten-free flour mix for sauces). Garnish with chopped parsley, green onions or cilantro.

If you wish to use a crock pot instead of a stove-top kettle, I cooked the beans for 1 ½ hours in water separately, drained them and then added them to a crock pot along with the broth, garlic, onion, spices, chiles and chicken. The crock-pot cooked on high for approximately 4 hours and I then thickened the liquid 30 minutes or more before serving.

Thanks to Anne Laviolette  
for this picture  
and to Chris Aupperle  
for the article & recipe!

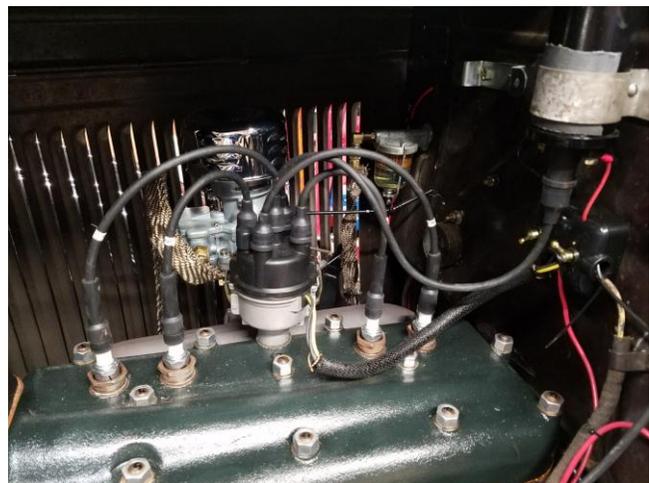

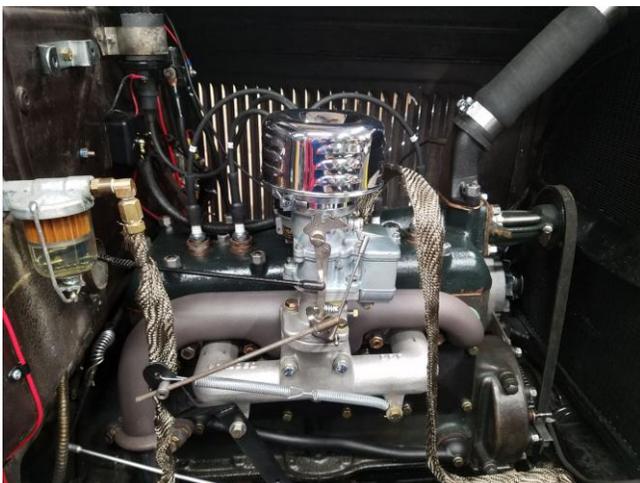

## **What I Did This Winter... "If It's Not One Thing, It's Two"** by George Brunson

You can always tell when winter has been around too long just by all the items you have repaired, replaced, or added. And this seems to have been a long winter! Here's the saga of my '30 coupe.

The first thing has been the replacing of the valves and guides and then adjusting the valves – a natural chain of events after a valve job. Next, you might want to install a new intake manifold, especially if the old one was cracked. That of course would lead to a new downdraft carburetor. While you're changing all that, it would be a good time to replace the existing distributor to one with a centrifugal advance and electronic ignition. With all that done, why not go for the LED headlights? It's a simple exchange and they are, or at least seem to be, better. And of course that might lead to LED driving lights for safety's sake. It's like Dave Clark always says, "If you're in for the penny, you might as well go for the pound." Hard to argue with that logic!

Finally, it's time to fix that front fender crack you've been looking at for years. You know you've been wanting to anyway. Have you ever noticed how that fender shakes like a dog trying to pass a peach seed when the car is running? Well, try this: clamp a pair of vice grips right on the crack. Don't worry about the finish, the fender is already cracked, you have nothing to lose. You will, or at least you should – notice the fender holding fairly still. That should demonstrate that the crack is something you can and should fix. Sorry, we can't help the dog though... Anyway, a good body shop can fix the problem. Our local body shop said that will run about \$600! That prompted the idea of fixing it on my own. One way is to use a modern glue product from 3M to glue a patch over the affected area from the inside. The body shop said it would be better than welding, because we all know welding is a stop gap method...it almost never lasts. They have been using this glue method for several years with great results. With a little research and a good body hammer, I've been able to fabricate an interior patch and install it. It actually took two patches. One patch inserted into the lip of the fender, the other over the lip patch and a larger area of the fender to secure the whole area around the initial crack. I allowed the lip patch to set up for two days before attaching the second patch. The second patch was allowed to set up for four days before I ran the engine test. There was NO fender shake with the engine running! The fender feels more solid now, too. After a test run to Clinton for the Model A breakfast, we were certain the patch was working. This past Wednesday, Dave Clark and I applied the same process to a 4" long crack on his front fender. It will be interesting to see how well it holds up. If anyone else would like to try this method, I have the epoxy and a glue gun to loan out. All you will need to purchase is a piece of sheet metal and nozzles for the glue. I'll be glad to help in any way necessary.

Hope you've done all the winter work your car needs. And if you did, let us know and we'll put it into the Manifold News – and please, don't forget to send some pictures.
