Glimpse from the Gavel

Bill Aupperle, Director

Take time to introduce yourself and get to know our new Rock-Ford As members.

Our Fall Tour , October 3rd, is almost here. If you do not have a car to drive, but want to go, let an officer know. There are many members that have room for passengers; also a great way to get acquainted with our members.

Urgent!! We need more topics for Tech-Talk discussions. Continue to bring in more 'Show & Tell' items. Let us know what you've been working on or fixing.

Editor's Extras

Chris Aupperle, Editor

This month's Tech-Tip comes from Dave Clark, who put us in touch with the Ford Barn website. Thank you, Dave, for your continuing support to this newsletter. Ladies, if you find a topic of historic interest for our Lady A's discussions, please let me know!

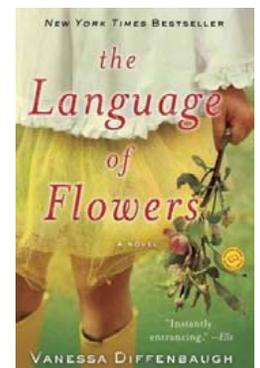

It's time to share your stories, folks. This makes the job of publishing this monthly newsletter much easier for me. PLEASE send me YOUR stories! I'm happy to help you write your article, too.

Let me know if you are not getting your newsletter via email or postal delivery – let's keep in touch!

Member's Corner: Denise Ethun

Thanks to Denise for her interesting presentation at this month's meeting on the topic of "the language of flowers", a Victorian custom of using flowers to send messages based on meanings assigned to specific blooms. We now know to send red roses to the ones we love, but never yellow flowers!

Tech-Tip: Electrical Safety in Your Model A

(retrieved from <http://www.ocmafc.org/techarticles/electricalsafety.htm>)

by John McMillan

Most of the following are faults and/or safety hazards that I've encountered in Model A's and other less worthy vehicles. The cures are neither expensive nor technically difficult.

BATTERY

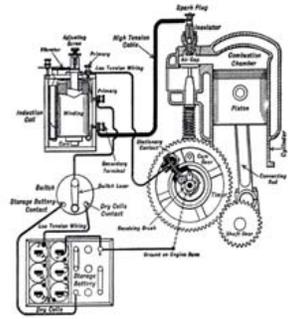

Hold Down: Without a hold down, the battery can bounce around, resulting in case cracks and acid leakage or cable shifting and abrasion resulting in a possible short. Easy to correct.

Ground Strap: Attachment to frame should be to BARE METAL. We usually apply lots of paint to the frame and unless some is removed where the ground strap attaches, then a solid ground cannot be achieved. A coat of dielectric grease helps to promote good contact and slows rusting when applied to bare metal. With a poor ground, the starter will turn real slow, and draw far more current than it should. Easy to fix.

Cable Size: Modern cables that you can buy at your local auto shop are too small. Small cables cannot carry the current draw of a starter motor safely. They will overheat and the starter will turn slowly. The cable size should be No. 1. These can be special ordered at the local parts house, or buy them from a vintage Ford dealer.

Caps: Make sure the battery vent caps are not plugged. If they're plugged, and the charge rate is high, the battery can explode from gas buildup inside the battery. Very exciting, very messy and very dangerous. Plugged caps are caused by dirt and, I suspect, by using hard water in the battery. Clean caps and distilled water are the inexpensive answer. I had one blow up in a German Model A (VW) and the cleanup alone took about 8 hours.

Cable routing: The negative cable to the starter MUST be routed according to Ford's plan. See illustrations in any of the Ford repair manuals. Other routings most likely will cause cable insulation chafing and a resulting short circuit. Even if you installed a fuse, this is not a fused cable, and a fire is very likely. I've seen this several times, the last time at Big Bear when a member complained of white smoke every time he stepped on the brake. The pedal pushed the battery cable against the bell housing and shorted out. If a fire starts here, you need to disconnect the battery to stop the fire source. Very hard to get to, you might wind up watching your car burn while you try to remember if your fire insurance is paid up. This kind of fire can also happen after you've parked the car in your garage. Real easy to fix. Note that no safety switch or fuse installation will eliminate this hazard, the only way to cure the problem is to "do it right the first time", and it takes no more effort than to do it wrong.

Fashion Fun - Pen and Pencil Sets

By Judy Lewis (MAFCA Fashion article - July, 2013)

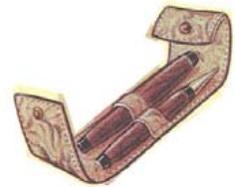

As advertised in *Art Needlework*, Fall and Winter 1930 - 31, Catalog No. 37

retrieved from www.mafca.com/ef_articles.html

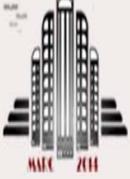

Pen and pencil sets are great items to use as an accessory and are easy to find in most antique shops, flea markets, estate sales and the like. Most of the sets I have seen are in very good condition and can fit easily in a handbag or the inside pocket of a suit or sport coat. The following are quite typical of all 4 years of the model A era.

(top image) Ladies' non - breakable pen and pencil set. 14K gold fittings. Red or green with gold marbled effect. Leatherette case. Per set, postpaid \$1.25

(bottom image) Combination pen and pencil. When not in use it is carried like a pencil. Pen has gold nib with iridium tip and gold trimmings. Triple action pencil. Guaranteed unbreakable. Mother - of Pearl and black. Price, postpaid \$2.75

Model A Gallup to Puyallup
 2014
 MAFCA National

July 14 - 18, 2014

Sponsored by The Gallopin Gertie Model A Club. On the Western Washington Fairgrounds in Puyallup, WA. Puyallup, Washington (pronounced Pew al up), one of Washington State's oldest cities, is located approximately eight miles east of Tacoma in the Puyallup River valley.

Sitting at the foot of Mt. Rainier, the area boasts spectacular views while still providing a modern-day urban atmosphere inside the city.
